

TEDLAPALLI RISHITHA

Kalapakkam , Tamil Nadu , India | tedlapallirishitha@gmail.com | +91 7671868323

<https://www.linkedin.com/in/rishitha-tedlapalli/> |  Rishitha7272 - Overview

OBJECTIVE

A motivated and detail-oriented individual skilled in Python, SQL, and scientific computing libraries such as NumPy and Pandas, with practical experience in machine learning and computer vision. Seeking an academic research environment to collaborate with innovative teams, explore novel AI methodologies, and make a meaningful contribution to the field.

EDUCATION

Bachelor of Technology in Artificial Intelligence and Data Science **AUG 2024-Present**

Kalasalingam University, Krishnankovil , Tamil Nadu (Grade : 9.8/10)

Board of Intermediate Education , AP (Maths, Physics , Chemistry) **2022-2024**

Narayana Junior College , Tirupati (Percentage : 96.7%)

Board of Secondary Education , AP **2021-2022**

Oxford Public School, Sri Kalahasti (Percentage: 95%)

SKILLS AND INTERESTS

Technical Skills: Python , SQL, supervised learning , web scraping, Visualization

Tools: GIT , Figma, VS code ,Cursor

Area of Interests: Develop Scalable applications to solve Real world Problems using ML & Data Analytics

Soft Skills: Peer Learning, Collaborative, Time Management, Inter Personal communication & Public Speaking

Other Skills: UI Designing , Web Development , Mongo DB , Descriptive Analytics

Languages: English, Telugu, Hindi

Positions of Responsibility

Secretary - ACM Student Chapter | Kalasalingam University| April 2025- Present

- Assisted in onboarding and orienting new members into the chapter's structure and ongoing initiatives.

Web Developer - ACM Student Chapter | Kalasalingam University | Aug 2025 – April 2025

- Designed and maintained the official ACM chapter website using React.js .
- Built event landing pages for hackathons and technical events reaching 400+ students.

PROJECTS

MedConnect.AI – Intelligent Healthcare Platform | Backend Developer | Python, React.js, LLM, FAISS/Pinecone, Supabase (2nd place out of 50 teams)

- Worked to architect a scalable full-stack healthcare platform featuring video consultations, lab report management, online pharmacy, and a privilege-based admin panel to prevent medication misuse.
- Conceived and built an AI-powered RAG chatbot agent capable of understanding patient-reported symptoms, retrieving relevant medical knowledge from a vector database, and delivering accurate, context-aware diagnostic responses.
- Independently trained a custom machine learning model on medical symptom datasets, enabling domain-specific disease prediction tailored to the platform's diagnostic requirements beyond generic LLM capabilities.
- Designed the RAG pipeline by embedding medical knowledge bases into FAISS/Pinecone vector stores and connecting retrieval outputs to an LLM to generate intelligent, grounded clinical suggestions.
- Integrated the Gemini API to power a generic medicine recommendation engine, suggesting appropriate over-the-counter medications to patients based on identified symptoms and diagnosed conditions.
- Developed the chatbot agent logic in Python, enabling multi-turn conversational flow where the agent reasons over retrieved documents to simulate a preliminary medical consultation experience.
- Configured WebRTC via Jitsi Meet to support secure real-time video consultations, complementing the AI chatbot with human doctor interaction.

EduBot – AI Study Assistant | Backend Developer | Python, LangChain, Gemini API, FAISS, React.js

- Architected a RAG-based conversational study assistant that ingests academic PDFs and textbooks, chunking and embedding content into a FAISS vector store for efficient semantic retrieval during student queries.
- Designed and implemented the end-to-end RAG pipeline connecting FAISS-powered document retrieval with the Gemini API, enabling the LLM to generate contextually grounded, source-backed responses rather than relying solely on parametric knowledge.
- Trained and fine-tuned a custom embedding model on academic domain content to improve retrieval precision, ensuring responses remain accurate and relevant to subject-specific student queries.
- Engineered a multi-turn conversational agent with memory retention using LangChain, allowing students to ask natural follow-up questions and maintain coherent dialogue across complex academic topics.
- Developed RESTful backend APIs in Python to handle document ingestion, query processing, and response streaming, seamlessly integrated with a React.js frontend for an intuitive study interface.

CapacityCare – Hospital Descriptive Analytics Platform | Full Stack Developer | React.js, Node.js, Express.js, MongoDB, Mongoose

- Architected a full-stack hospital analytics platform with a Node.js and Express.js backend paired with a React.js frontend built on Vite, utilizing MongoDB as the primary database with Mongoose ODM for structured schema management across hospital operational datasets.

- Engineered dynamic and interactive visualizations covering resource utilization, staff management, daily disease trends, and treatment cost versus expenditure analysis, each filterable across departments and patient age groups.
- Delivered fully dynamic and interactive visualization components using React.js with custom CSS styling, enabling real-time filtering by department, age group, date range, and metric type for granular analytical exploration.

ACHIEVEMENTS AND AWARDS

Secured 2nd place out of 50 teams at Innovatron 2026 Hackathon with the MediConnect.AI project, competing against teams across multiple institutions.

Awarded Certificate of Merit for achieving a GPA of 9.75 at the end of the first academic year, recognizing outstanding academic performance.

Received Certificate of Achievement for scoring a GPA of 9.8 in the 3rd semester, reflecting consistent academic excellence.
